**Subject:** Media inquiry on Dimock

Betsaida -- A local radio station from a town near Dimock contacted us asking for a general update on EPA's sampling. I plan to send them our original press release and give them this general update. Please advise. Thank you.

EPA is the Dimock community hoping to sample 66 homes. Sampling will continue for two to three more weeks. EPA also continues to provide water to four homes. Our priority is the health of the people in the community, and we are conducting monitoring as a prudent step to both investigate residents' concerns and determine the need for further action based on sound science.
